SOVIET-CHINESE COMMUNIST NAVAL AID TO NORTH VIETNAM

INTRODUCTION

25X1D Soviet and Chinese Communist naval aid to North Vietnam continues. The most recent Soviet aid consists of T-4 and T-4 variant LCMs (mechanized landing craft), pilot boats, motor launches, and small river launches [REDACTED]. The Chinese have contributed numerous new SLs (small logistics vessels), an LST (AO) (tank landing ship converted to an oiler) (Figure 1), a naval auxiliary, possibly of Chinese construction (Figure 2), YFs (covered lighters, self-propelled), AOs (small oilers), and small harbor patrol craft.

BASIC DESCRIPTION

25X1D

Soviet naval aid has been directed toward harbor and small logistics vessels with little or no armament. Since [REDACTED] the North Vietnam

inventory of T-4 and T-4 variant LCMs has increased from 20 to 33. The LCMs (Figure 3) have been used as general cargo and POL (both bulk and 55-gallon drum) carriers. Also, at least eight small river launches, observed from Haiphong to Quang Khe, have been added to the previous ten. Since [REDACTED] two pilot boats and 12 motor launches have been introduced, and four pusher-type tugboats (towboats) have been added.

Although the Chinese have produced river steamers, barges, and tugboats for North Vietnam, their aid has centered around infiltration or infiltration-support vessels and combatants. Since [REDACTED] Chinese Communist aid has been used to add 19 vessels to the North Vietnam infiltration order of battle. The Chinese aid is reflected in the increase of the SL-2 inventory from two to six since [REDACTED]. The SL-1 inventory has increased from 24 to 32 vessels, and three Wuhu YFs have been added to the North Vietnamese fleet since [REDACTED] the Chinese Communists introduced four new SL-7 infiltration vessels (Figure 4).

The Chinese have contributed other naval aid to North Vietnam. Since [REDACTED] the new-class YP (patrol craft) inventory has increased from [REDACTED]

one to five. In [REDACTED] at least 15 Type 46 AOLs were introduced. In [REDACTED] a possibly Chinese Communist naval auxiliary was photographed. The addition of a second LST (AO) in [REDACTED] has increased the North Vietnamese capability to off-load POL and could cause a substantial decrease in the turnaround time of incoming tankers.
